

## Data Table Descriptions

Data table is called tblSizeRange. It was created by the export of data from an SQL Server database.

Table contains count, size range, and weight information, if available, for fish, non-penaeid shrimp, and 'Other Invertebrates'. If count = 0, a code of '-999' indicates no fish, non-penaeid shrimp, and/or 'Other Invertebrates' to measure or weigh for given record or sample. If count  $\geq 1$ , a code of '-999' in measurement column indicates damaged specimen(s) that could not be measured for given taxon. Empty column indicates parameter was not measured. No biomass/weight data for fishes or 'Other Inverts' for any JB samples, so no Table for weight/mass data. Fishes & 'Other Inverts' measurements are in Size Range Table, which includes the midpoint for each length interval, not mean size of animals within said interval. All penaeid and other nekton counts must be divided by 2.6 to calculate number per meter squared values because larger 1.8-m diameter drop trap sampled an area of

Jamaica Beach Coastal Wetlands Project 1985: Samples 643-721.1 (non-consecutive). No biomass/weight data for fishes or 'Other Inverts' for any JB samples. For 'Other Inverts' and fishes, only animals >5 mm TL were removed, identified, measured, and recorded.

Jamaica Beach Salt Marsh Project 1982-1983: Samples JB-1982-001 to JB-1983-163.1. No station 139 or 139.10. Only removed and measured natant macrofauna (fishes and 'Other Inverts') >10 mm TL. Fish and 'Other Inverts' (non-penaeid shrimp) were measured, but length intervals are inconsistent. Area sampled was 2.6-m<sup>2</sup>, not 2.8

Jamaica Beach/Christmas Bay 1984-1985: Samples 383 to 390.2 and 411-426.2 & 475-714.1 (non-consecutive).

Jamaica Beach/Confederate Reef 1988-1989: Samples 1-4 at Confederate Reef were not included because they were taken during a preliminary site selection test.

Jamaica Beach Special Project 1987: Samples 907 through 936 collected on April 17 and May 15, 1987. 'Other Inverts' measured in increments of 5-mm, and fishes in 10-mm TL intervals.

Blank data cells indicate that data was not recorded.

Renamed\_Data\_Table is a duplicate of Original\_Data with updated column names.
