Our reference H1384/87

Date 6 October 1987

Dear Sir

Further to my letter H1384/87 dated 27 April 1987 to John Churgin, I enclose a M/T (No B50757) of all UK BT data to 1986. This data file, containing 62,639 observations replaces all previous BT data sent to you, which should be removed from your files.

An inventory of the complete file by Marsden and degree squares per month is enclosed.

The M/T is 9 track, 1600bpi, 2000 bytes per block (25 records), labelled (with tape number) in ASCII. The data format is NODEF-1 - copy enclosed. A printout of the first and last 10 blocks of the M/T are enclosed.

All data on this file can be released to the WDCA.

Yours sincerely

for

T DALZELL

FORMAT EXPLANATION AND DESCRIPTION

1. An observation will consist of multiple card image records of various types. A description of the various record types follows. The remainder of this annex contains details of the record formats.

<u>Record type</u>	<u>Name</u>	<u>Details</u>
0	Source	Originator's observation identification number, date, time, position, type of observation, details of processing methods.
1	Meteorology	Meteorological conditions prevailing at the time of the observation.
2	Comments	Any other information not catered for in the format.
3	Bathythermograph	Depth/temperature values, usually from BT instruments.
4	Velocimeter	Depth/sound velocity values taken by velocimeters.
5	Serial (observed level)	Depth/temperature/salinity/conductivity/sound velocity values at an observed depth - usually water bottle or STD/CTD type data.
6	Serial (interpolated level)	Depth/temperature/salinity/conductivity/sound velocity values interpolated from observed level data.

2. All record types except type 0 are optional although an observation must contain at least one record of type 3, 4, 5 or 6. Any record type except types 0 and 1 may be used a number of times in each observation. (see Annex C).

3. An observation may not contain type 3 or 4 records if it contains type 5 or 6 and vice versa

FORMAT EXPLANATION AND DESCRIPTION

1. An observation will consist of multiple card image records of various types. A description of the various record types follows. The remainder of this annex contains details of the record formats.

<u>Record type</u>	<u>Name</u>	<u>Details</u>
0	Source	Originator's observation identification number, date, time, position, type of observation, details of processing methods.
1	Meteorology	Meteorological conditions prevailing at the time of the observation.
2	Comments	Any other information not catered for in the format.
3	Bathythermograph	Depth/temperature values, usually from BT instruments.
4	Velocimeter	Depth/sound velocity values taken by velocimeters.
5	Serial (observed level)	Depth/temperature/salinity/conductivity/sound velocity values at an observed depth - usually water bottle or STD/CTD type data.
6	Serial (interpolated level)	Depth/temperature/salinity/conductivity/sound velocity values interpolated from observed level data.

2. All record types except type 0 are optional although an observation must contain at least one record of type 3, 4, 5 or 6. Any record type except types 0 and 1 may be used a number of times in each observation. (see Annex C).

3. An observation may not contain type 3 or 4 records if it contains type 5 or 6 and vice versa

4. Record type 6 should only be provided as an alternative to record type 5 when observation level data has been lost during processing, since the recipient of the data may prefer to use a particular method of interpolation not used by the donor.
5. When an observation requires a total of more than 999 records of one type (eg high quality STD data) (Record type 5), a continuation observation is to be used.
6. Block size. Records should be blocked into not more than 512 words (2048 characters) per block.

NOTES FOR USERS

1. It is necessary to distinguish between continuation records and continuation observations.
 - a. Continuation Records. Usually the data levels from one observation cannot be contained in a single record of the appropriate type. Subsequent records of the same type are called continuation records and follow precisely the same format as the first record of that type. The maximum number of continuation records of any one type is 999, and will be indicated in character 78-80 of each record type. Record types 0 and 1 cannot have continuation records.
 - b. Continuation Observations. When an observation requires more than 999 data records to contain it, a continuation observation will be used. A continuation observation will start with a repeat of record type O, with the continuation observation indicator (character 60) incremented by 1, followed by the required number of records of types 3, 4, 5 or 6 as appropriate.
2. End of File Marks. The end of file mark (EOF) should only be used at the end of a file containing all observations of one type, eg at the end of a file of BT observations.
3. Cruise and Serial Numbers. When cruise numbers are not recorded the year number should be inserted instead.

The serial number taken together with the cruise/year number, ship and country codes, should provide a unique reference number for any observation within a file.

4. Tape Characteristics. In data exchanges the following tape characteristics need to be agreed between the donor and the recipient.

- a. Recording mode - PE or NRZI
- b. No of tracks - 7 or 9
- c. Parity - odd or even
- d. Packing density - 556, 800 or 1600 bpi
- e. Inter-block gap size
- f. Tape codes - BCD, EBCDIC, ASCII or others

'ORGANIZATION_CODE'

Data_Back_Fields : COAORG(N260), CSHORG(N680) and within IDAISY(N680)

Use : Three character code to identify Organization, Institute, Laboratory or University Department supplying or collecting data. This code is assigned within country so that a given organization can only be uniquely identified if both its country code and organization code are specified, except only where it is specified within IDAISY where no country code is present and is assumed by default to be the UK, i.e. codes for organizations supplying data to MIAS are assigned according to the UK Code. The UK Code consists of 3 numeric digits and is assigned by MIAS.
