

NOAA Extreme Weather Information Sheet (NEWIS)

Providing Critical Information

NOAA’s National Centers for Environmental Information (NCEI) produces the NOAA Extreme Weather Information Sheets (NEWIS). The goal of NOAA Extreme Weather Information Sheets is to help citizens increase their weather readiness as a part of NOAA’s Weather-Ready Nation initiative. NOAA Extreme Weather Information Sheets provide residents with a “one-stop” ready reference containing important contact phone numbers and websites in their states and local areas that residents need before and after an event such as a hurricane.

All 22 of the NOAA Extreme Weather Information Sheets are also available online at www.ncddc.noaa.gov/NEWIS. Feel free to print, link to, and share the sheets. NEWIS is also available as a free app compatible with Apple devices such as iPhone, iPod Touch, and iPad. Search ‘NEWIS’ in the App Store.

Staying Up-to-Date

Since points of contact may change from year to year, NCEI verifies all contacts, phone numbers, and websites listed on NOAA Extreme Weather Information Sheets on an annual basis. NCEI continues to monitor the information throughout the hurricane season and posts any updates on the appropriate online version. NOAA and NCEI encourages everyone to make a plan for extreme weather, to stay informed by listening to the official weather forecast from NOAA’s National Hurricane

Center or your local NOAA Weather Forecast Office (www.weather.gov), and to follow the direction of local emergency managers and law enforcement in the event of a life threatening situation.

Covering At-Risk Regions

NOAA Extreme Weather Information Sheets were created to cover coastal regions of states and the two US territories that are particularly at risk from tropical storms and hurricanes.
